Bathroom Safety

Lighting

2 bulb fixture

Illuminated switch/motion sensor

Flooring

Non Slip Surface

Eliminate tripping hazards - loose throw rugs/electrical cords

Bathroom Safety

Use Lever Handles

On door and faucet fixtures

Countertops

Contrast color from the floor – can you find a pill set on the countertop?

Contour countertop edge with contrast color edge

Safe Bathing Products

Quality showers and walk-in tubs that are easy to clean – composite fiberglass is recommended.

Safe Bathing Products

Tile grout holds germs including staph, a leading health concern to all family members.

Safe Bathing Products

Showers and walk-in Tubs should fit into the existing bathing space.

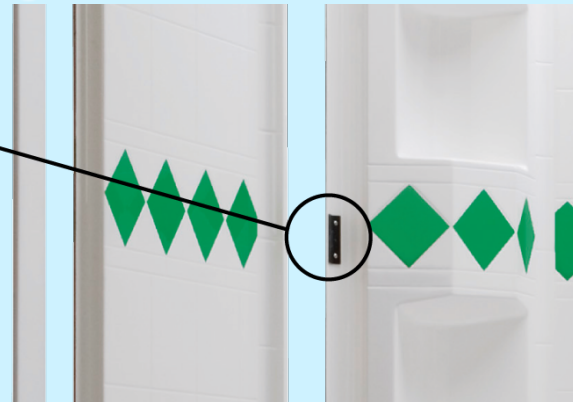

Safe Bathing Products

Bath products should be easy to install.

- Snap Joint Assembly walls

Snap Joint Assembly

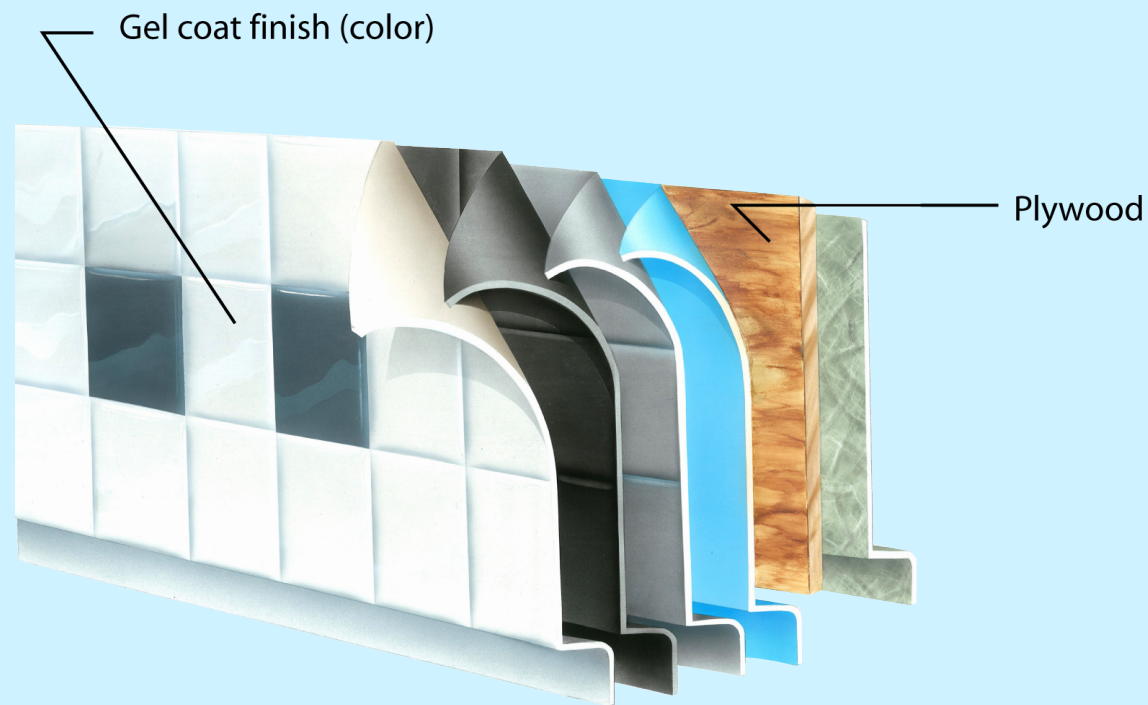

fast and easy
installation with a
clean, tight look

- Water-proof seams
- Pre-leveled floors, no mud setting

Safe Bathing Products

All walls should be wood encased throughout for future grab bars and seat installation.

Safe Bathing Products

Grab bars should be located for the individual needs, not just where they can be attached.

Grab bars should have color contrast to the walls for easy location.

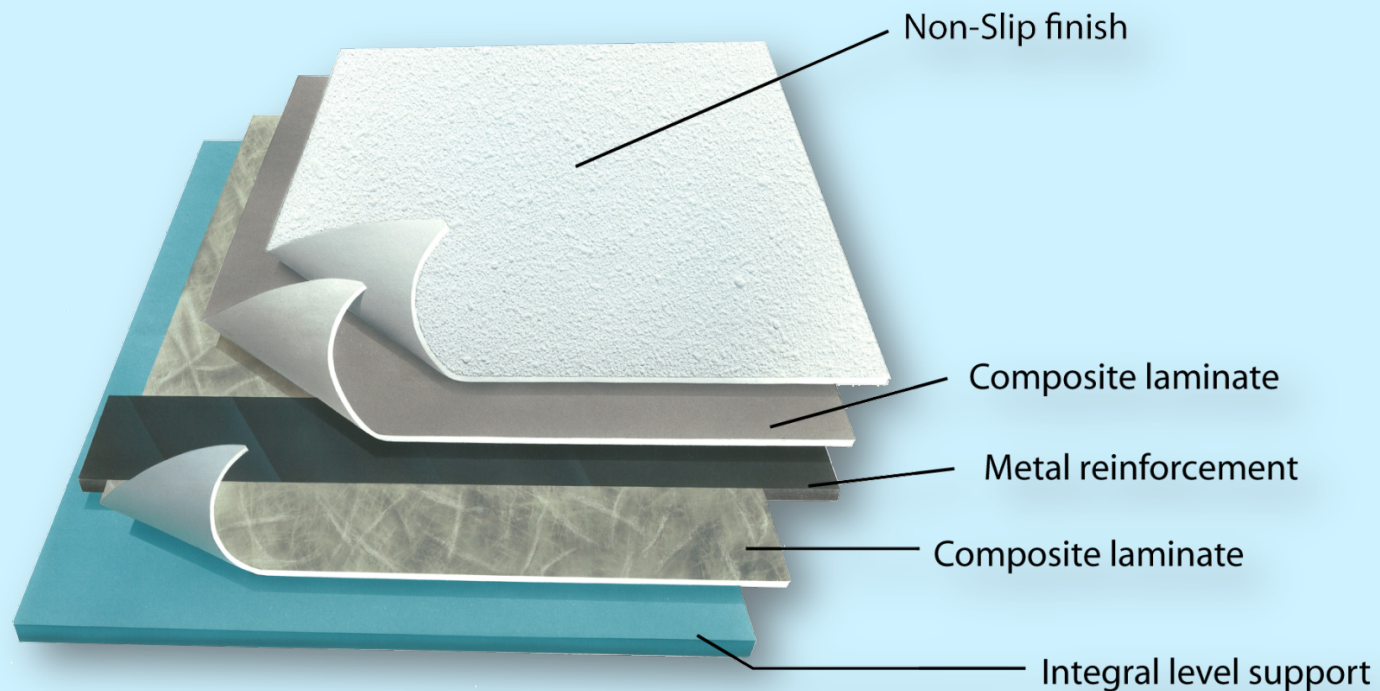

Safe Bathing Products

Seats should have four solid legs and attach securely to the wall.

Safe Bathing Products

The floor texture should be non-slip, but not so rough it will cut feet.

Safe Bathing Products

For re-sale values, Showers should be able to be either conventional or barrier free.

Universal Design

Safe Bathing Products

Work with professionals who specialize in safe bathing and can help you with product choices and options as well as professionally install those products of choice.
